## Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136 (a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133).
- Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Art Unit: 1724

Applicant's election without traverse of Group I, claims 1-52, in Paper No. 6 is acknowledged. Applicant's election of glass fibers as the filter particle species, and ammonium lignosulfonate as the lignosulfonate species is also acknowledged.

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1 and 2 are rejected under 35 U.S.C. 102(b) as being anticipated by Harris et al. (U.S. Patent No. 4,225,443). The reference discloses a filter having an inlet and an outlet (see col. 10, lines 60-67), and containing a bed of filtering material comprising glass particles (col. 4, line 11) in combination with a lignosulfonate binder such as ammonium lignosulfonate (col. 9, lines 6-7); and the lignosulfonate binder of this composite material will inherently "coat" the glass particles to some extent, as required by claim 1. Also, this "filter" will inherently include a housing, as further required by claim 1.

Art Unit: 1724

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 3-52 are rejected under 35 U.S.C. 103(a) as being unpatentable over Harris et al. The reference discloses the claimed invention with the exception of the form of the glass particles (i.e. fibers), the carbon add-on in the coating, the surface area of the particles, the sum of the mesopore and macropore volumes in the particles, and the BRI and VRI ratings of the filter. However, the exact form of the glass particles in the reference filter, the exact carbon add-on in the coating of this filter, the exact surface area of the particles in this reference filter, the exact sum of the mesopore and macropore volumes in these particles, and the exact BRI and VRI ratings of the reference filter are not seen to materially affect the overall operation of the reference device, or to produce any new and unexpected result; and are therefore deemed to be obvious matters of choice in design, insufficient to patentably distinguish the claims.
